- ▶ Stylish frosted acrylic shelves to display brochures/magazines.
- ▶ Shelves can all face the same way or be set up in zig-zag arrangement for double-sided access.

Description

Multi-shelf brochure display

The InfoRack brochure display stand is a premium quality catalogue rack comprising of a robust round base and central mast with either eight, nine or ten literature shelves. The brochure display stand illustrated has 9 shelves set up in a stepped configuration. The heavy-duty shelves are capable of dispensing heavier brochures such as travel or holiday brochures.

- Stable and sturdy 2m high brochure rack with an attractive silver finish. Ideal as a showroom brochure rack or catalogue display stand.
- Recessed channels on each side of the mast allow side shelves to be secured in any position, facing either way (level or stepped; tiered or zig-zag when viewed from the side).
- Depending on the model, eight, nine or ten frosted acrylic brochure display shelves (supported on metal arms) accommodate A4 brochures or oversize A4 magazines. A curved return at the foot of each shelf retains 40mm depth of catalogues.

N.B. The banner arm option is not appropriate to these particular models as the display rack is filled up with brochure shelves.

Display Rack for Multiple Brochures – Choice of 3 configurations

Actual shelf size:
W: 250mm
H: 320mm
D: 40mm

Assembly and Installation

Assembly of InfoRack

The base and pole are common to other products in our InfoColumn range. The pole (or Mast) is attached to the base from below. Fixings are supplied together with a hexagonal key to tighten up securely. Once assembled, the base and pole are very sturdy and will take a lot of weight.

The cap of the mast is removed to enable the leaflet display shelves to be slid down the appropriate channel in the configuration that you require. An Allen key is supplied to tighten the shelves in place – readjustment is possible.

The frosted acrylic shelves are secured onto the side support arms with screws, such that it is possible to create a tiered or zig-zag display. The inclination of the shelves is fixed.

Delivery and Returns

A choice of delivery options are offered – please see the [delivery](#) page for details.
Please see our [Returns Policy](#) for details of how to return a product.
