Twin loop black wire hanging kit ideal for dark ceilings

In dark ceiling spaces black suspension wires and fittings can virtually disappear. This multi-use suspension kit consists of a strong yet slender black-coated wire with a pre-formed loop at one end and a black colour loop-creator fitting, called an Urban Trapeze, at the other end to create a second loop.

- The double-loop suspension kit is adaptable to many situations, ranging from suspending shop window displays from an overhead pole, to suspending props or lightweight lighting rigs over a stage or unlit ceiling void above a restaurant dining area.

Fully adjustable loop-around suspension kit

- The loop-end cable is 2m long - so that is the maximum 'drop' for this kit.
- The black wire is only 1.5mm thick so the suspension system is very discreet.
- The safe working load is 15kg per wire (the breaking strain is considerably higher, but we always recommend a 5 fold factor of safety for overhead hanging).

The pre-formed loop can be hung from a ceiling hook or used to create a lasso over the top of a pole or roof girder with the tail of the cable threaded back through the loop and pulled tight.

The second loop is created using the black version of a petite self locking fitting known as Urban Trapeze. The wire is introduced through one port of the Urban Trapeze, threaded around whatever you wish to hang, and passed back up through the second port. It grips automatically but the clutch mechanism can easily be released for adjustment by depressing either release button.

- This wire suspension kit (Order code UT.KIT.H-B) comprising a single 2m loop end cable and an Urban Trapeze fitting both with a black finish. A silver alternative is also available (Order code UT.KIT.H).

What can this suspension kit be used for?

The kit can be used either way up i.e. with the gripper fitting at either the top or the bottom.

The top fixing requires there to be a pole, rail, beam or hook in place. [Alternative kits are available for screwing to a ceiling.](#)

The black gripper fitting (Urban Trapeze) allows you to create virtually any size loop so it is very versatile. For example the wire can be looped through holes drilled in a sign board or acoustic baffle without worrying about whether a specific hook will fit the hole. Twin loop suspension kits can be used for hanging lighting, decorative artwork, suspended sculptures and much more besides.

More Information

Easy assembly

- Assembly and installation is very quick and easy.
- Excess cable can be coiled up or cut off using wire cutters.
- A release button serves to disengage the gripper if further adjustment is required.

Assembly and Installation

- We offer a choice of delivery options tailored to the goods selected and your location, calculated for you automatically in the Checkout. When feasible, you will be offered options for Free, Economy or Next Day delivery.
- Any product returned by the purchaser must be unused and in its original packaging, which should be unmarked. If goods are received damaged or faulty we will take care of the problem.
